5.2 INTRODUCTION

Rajasthan State Mines & Minerals Limited (RSMML) is a public sector enterprise of Government of Rajasthan. Rajasthan State Mines & Minerals Ltd. (RSMML) has originated from a private company -Bikaner Gypsum Limited (BGL) that was founded in 1947. In the year 1973-74 the government took over Bikaner Gypsum Limited (BGL) and formed Rajasthan State Mines & Minerals Limited (RSMML) with its registered office at Jaipur and Corporate Office at Udaipur. Rajasthan State Mines & Minerals Limited (RSMML) acquired the status of a public sector enterprise of Government of Rajasthan w.e.f. 1/4/1988. Government of Rajasthan holds more than 99.9% shares of Rajasthan State Mines & Minerals Limited (RSMML). Subsequently, in the month of Feb'2003 Government of Rajasthan amalgamated two of its companies i.e. Rajasthan State Mines & Minerals Limited (RSMML) and Rajasthan State Mineral Development Corporation Limited (RSMDCCL) under Section 396 of the Companies Act, 1956. After amalgamation, four mineral based Strategic Business Units & Profit Centers (SBU & PC) have been set up as detailed out below -

1. SBU & PC – Lignite at Jaipur
2. SBU & PC – Rock Phosphate at Jhamarkotra, Udaipur
3. SBU & PC – Center – Limestone at Jodhpur
4. SBU & PC – Gypsum at Bikaner

The Corporate office situated at Udaipur co-ordinates and controls all the activities of different Strategic Business Units & Profit Centers. Other than respective Strategic Business Units & Profit Centers (SBU & PC) as above, the Company has also got its offices at Jaisalmer, Nagaur, Barmer and New Delhi.

5.3 GENERAL DETAILS

Kasnau-Matasukh Lignite Mine is situated 35 Km. SE of Nagaur City. The deposit falls in Survey of India Topo sheet No. 45 I/4 between latitude 27⁰ 03' 47.67" - 27⁰ 06' 38.10" and longitude 74⁰ 03' 13.38" to 74⁰ 04' 42.68".

The Strategic Business Unit & Profit Center - Lignite of RSMML is presently engaged in mining of Lignite. The vital importance of Lignite as a key input for energy requirements in industry and that of Kasnau-Matasukh Lignite Mine as a reliable source of good quality Lignite. Today, an array of sophisticated mining machinery operates at Kasnau-Matasukh. The approved lignite mining from Ministry of Forest & Environment (MOEF) is 1.00 Million Tones per annum. Presently, lignite extraction is to the tune of about 0.60 Million Tones per annum.

5.4 THE DEPOSIT

The Kasnau-Matasukh Lignite deposit was discovered in 1985-86 by Department of Mines and Geology, Government of Rajasthan. Since then extensive exploration work was carried out in Kasnau-Matasukh area to establish the available Lignite resources.

Subsequently in July, 1997, drilling was taken up by Department of Mines & Geology, Rajasthan and a total of 124 no. of bore holes were drilled covering about 90 sq KM area and out of this, 55 bore holes were located in the potential 7.1 sq.KM lignite bearing reason. A total meterage drilled for 15920.88 meter almost covers the potential area under 400 m grid interval at Kasnau-Igiyar area.

Matasukh deposit being on the Northern side of the Kasnau deposit and being very near to it, its exploration started in May 1993 and was completed in December 98 with 75 no. of bore holes with a total drilling meterage of 7877.30 M. This area has almost been covered under 200 m x 200m grid interval.

The sediments belonging to Palana Ganganagar shelf area extend as thin embayment in the southern direction and extend into Nagaur-Merta area. All the pockets of lignite occurrences in these regions are therefore coeval to lignite occurrences of Palana-Barsinghsar region. The structural impress in the area is not so severe.

In Kasnau area three sub basin near Igiyar, Kasnau & Matasukh Villages have been identified. On the basis of available exploration data, these lignite bearing sub basins represents favoured and isolated structural locales of lignite accumulation and lignite bearing sedimentary assemblages.

Matasukh Block

The roof behaves in uniform & gradual way. The roof in most cases is made up of clays, shaly lignite etc. The floor of the lignite seam is also composed of clay in most of the cases. The overburden generally consists of top soil, sand & Kankar, sandy clay fine to course grained sand stone, fullers's earth, variegated clays, grey block shales. The thickness of Overburden varies in each borehole.

In Matasukh the tertiary formation as revealed by drilling includes friable sandstone at bottom. Generalised geological succession in the area in descending order is as: Topsoil, sand kankar, sand stone friable. Sandy clay, variegated clay, grey clay, Lignite. The grey clay in the marker horizon for lignite.

Structure

Study of disposition & distribution of lignite in the limited known area of Nagaur basin indicating several disconnected basins of Palana Formation. This indicates an undulating Palaeo-topography. The same feature is reflected in the present area also. A Low degree of tectonic disturbance is also indicated by the structural picture worked out for most of these ligneous areas such as Palana Mines (1980) & Merta Road (1988).

Lignite

Grey black clay horizon passes into lignite horizon. The lignite is brown in colour. It occurs in single to multiple seams, separated by grey shale partings. Lignite is light in weight having specific gravity around 1.15 to 1.2 t/m³. In many bore holes, pyrite crystals are associated with lignite. Sometimes resin bands are also seen with lignite. Lignite of Matasukh is soft & friable.

Extent of lignite seams

The study of the geological cross sections of Kasnau, Igiyar & Matasukh blocks have distinctly brought out the nature and extent of the lignite seams within these basins.

Generally, in all these blocks, presence of only one lignite horizon is identified. However, this lignite horizon is occurring as number of seams interspersed with dirt bands made up of carbonaceous clay. Further, the roof & floor of the lignite horizon is generally made up of clay beds.

Analysis of Lignite Intersections

Band by band analysis of the lignite intersections are available from DMG(R) records.

The analysis of lignite intersections have been carried out by Central Scientific Laboratory, Jammu on “as received basis” and subsequently, recalculated to 45% moisture level to simulate the in-situ moisture condition. Some dirt bands occurring within lignite seams have not been subjected to analysis. In such cases, as assumed value of ash (80%) has been used for calculating overall analysis of lignite seam. The calorific value for individual bands of lignite seam has been calculated by DMG(R). In this block the composite grade of various seams indicate a calorific range of 2500 to 3000 Kcal/Kg. (Max. GCV up to 3229 Kcal/Kg).

5.5 EXPLORATION STATUS

The Kasnau-Matasukh Lignite deposit has been explored by Department of Mines & Geology, Government of Rajasthan and MECL in 3 phases from 1993 to 1996, 2002 and 2021 through exploratory boreholes and updated status detailed out in the table below:

1. DMG drilled total 75 nos. MDBH Series Boreholes having total drilling of 7877.30 meter with 200 m x 200 m grid interval from May 1993 to December 1998. There are 40 boreholes intersected Lignite and remain 35 boreholes are barren.
2. DMG have been drilled total 7 nos. CMDH Series confirmatory boreholes having total drilling of 875.00 meter from July to August 2002. All boreholes have intersected Lignite.
3. Recently, MECL have been drilled 1 no. MAdBH Series confirmatory borehole having total drilling of 60 meter in June, 2021.

S. No.	Borehole No.	No of Boreholes	Total Depth (in meter)	Agency	Remarks
1	MDBH series	40	3998	By DMGR	May 1993 to December 1998
2	CMDH Series	7	875	By DMGR	July-August 2002/ DMG

5.6 MINING & RELATED ACTIVITIES

The mining of Lignite from Kasnau-Matasukh Deposit was commenced in the year 2003-04. For systematic development of the Kasnau-Matasukh deposit, detailed studies and planning was done by CMPDIL ensuring safe mining. A depressurizing scheme was also implemented to ensure safe mining, as advised by CMPDIL & NIH, Roorkee.

The Mining Plan was approved by the Ministry of Coal, Government of India on 09.01.1998 whereas the EC was granted by MOEF on 19.07.2000. Revised Mining Plan has been submitted to MoC, GoI on 19.11.2018.

Looking to the need for sustaining the profitability and production under stringent and competitive market scenario, Kasnau-Matasukh Project, lignite extraction has continuously been done since 2004-2005. The current mining activities are already beyond the area envisaged in the approved Mining Plan dated 09.11.1998. The additional mining area within the original lease has been incorporated in the revised Mining Plan.

5.7 PRESENT MINING METHOD

The opencast mining method is being followed at Kasnau-Matasukh Mine for exploitation of the mineral. The Matasukh pit attained the maximum depth of 70 metres and the water table is being depleted substantially to work in dry conditions of the pit floor. The working levels are kept dry by continuous pumping of ground water through tube wells constructed on periphery of the working pit limit. Presently, the annual excavation of lignite is to the tune of 6 lac tones per annum with deployment of large size equipment such as 3.2/2.8/1.2 cum hydraulic excavators, 25/20 Tonnes dumpers etc.

The mining method involves 3m high benches; 6m wide with 70° face slope. Continuous backfilling of the pit is resorted to after de-coaling of the section.

5.8 MINE DEWATERING/ DEPRESSURIZING

During the course on mining in the year 2004 sudden inrush of ground water was encountered at 245 MRL thereby inundating the pit. Accordingly, implementation of effective dewatering scheme became an essential activity for continuance of mining operations. The hydro-geological investigation in Kasnau-Matasukh mine area has been undertaken by CMPDIL & NIH-Roorkee with a view to quantify ground water reserve (static & dynamic), so as to develop appropriate dewatering system.

The CMPDIL recommended construction of sixteen (16) tube-wells (of about 170 M³/Hr), so as to ensure adequate depletion of ground water table necessary for safe mining. It was suggested by CMPDIL to adopt a cyclic mining & depressurization for effective lowering of water table to at least 2m below the working level. The same was being followed.
